

LOVESH NAGAR

Linux System Administrator | Junior DevOps Engineer

Jaipur, Rajasthan - 302015 | 6350458087 | nagarlavish99@gmail.com | linkedin.com/in/lovesh-nagar | github.com/lovesh-nagar

PROFESSIONAL SUMMARY

Linux System Administrator with 1.5+ years of experience deploying production applications and managing Apache/Nginx, Proxmox, and DNS/email infrastructure. Hands-on with Docker — installation, troubleshooting, and container-based production deployments — and with building/extending GitHub Actions CI/CD pipelines. Working knowledge of container orchestration fundamentals (Kubernetes/Minikube, Ingress), core AWS services, and Azure basics. Actively growing into Junior DevOps and Cloud Support roles on a strong Linux administration and automation foundation.

PROFESSIONAL EXPERIENCE

CloudTechTiq Pvt. Ltd. — Linux System Administrator (Junior DevOps)

Sept 2024 – Present

Jaipur, India

- Deployed and maintained production-ready applications built in Node.js, Python (Uvicorn), Laravel, and React across Apache/Nginx and PM2-managed environments
- Installed and configured **Docker** on production Linux servers; containerized select Node.js and Python services for consistent, isolated deployments
- Troubleshoot **container-level issues** — networking, volume mounts, and resource limits — to minimize deployment downtime
- Built and extended **GitHub Actions CI/CD** workflows, resolving pipeline and build failures to streamline deployment from commit to production
- Diagnosed and resolved email deliverability issues using DNS records (SPF, DKIM, DMARC)
- Configured and managed virtual machines in Proxmox VE
- Set up and maintained daily/weekly backup solutions for disaster recovery
- Performed regular log monitoring, troubleshooting, and server patching to ensure system stability

GRRAS Solutions — Linux Intern

May 2024 – Sept 2024

Jaipur, India

- Installed and configured LAMP stack, deployed WordPress websites
- Deployed Laravel and Magento applications; configured databases, cron jobs, and SSL
- Gained practical experience with Docker volumes, partitions, and logical volumes (LVM)
- Set up DNS servers, handled log monitoring, SSH configuration, and cron automation
- Practiced server security, service hardening, and network troubleshooting

Learn N Prep — Digital Marketing Executive (Freelance)

Sept 2023 – May 2024

Kota, India

- Managed Google Ads, Facebook Ads, and created SEO-rich content for YouTube and blogs
- Performed basic server-side website updates; collaborated with the technical team on site deployments

TECHNICAL SKILLS

Operating Systems: RHEL, CentOS, Ubuntu

Web Servers: Apache, Nginx, LiteSpeed

Containers & Orchestration: Docker, Docker Compose, Kubernetes fundamentals (Minikube), Ingress, Kubernetes networking (Services, CNI basics)

CI/CD & Version Control: Git, GitHub, GitHub Actions, CI/CD pipeline build & troubleshooting

Monitoring: Prometheus, Grafana

Cloud – AWS (core services): EC2, S3, IAM, VPC, RDS, Route 53, ELB/ALB (load balancing methods — round robin, least outstanding requests, path/host-based routing), ECS & ECR, Lambda, CloudWatch, SNS/SQS, Auto Scaling

Cloud – Azure (basics): Virtual Machines (VMs), Azure Active Directory (Entra ID)

Scripting: Bash

Databases: MySQL, MariaDB, PostgreSQL, MongoDB

Control Panels: cPanel, Plesk, WHM

Virtualization: Proxmox VE

Networking: DNS, SSH, FTP, Crontab

KEY PROJECTS

DevBoard — Three-Tier Containerized Application (React · Go · PostgreSQL)

github.com/lovesh-nagar/Devboard-three-tier-application

- Built and containerized a 3-tier app — React/Vite frontend, Go REST API backend, PostgreSQL database — with a dedicated Dockerfile per service
- Orchestrated the stack with **Docker Compose**: health-check-based service dependencies, named volumes for data persistence, a custom bridge network, and .env-driven configuration
- Designed a **GitHub Actions CI/CD pipeline**: automated lint & test (ESLint, Go vet/test), Docker image build and push to Docker Hub, and CD deployment via a self-hosted runner (docker compose pull && up -d)
- Added a Makefile to automate common operations (setup, up, down, logs, reset, smoke test)

MySQL Master-Slave Replication — Percona MySQL 8.0 on Ubuntu

- Implemented production-grade MySQL Master-Slave replication across two Ubuntu servers using Percona MySQL 8.0 for high availability, read/write separation, and disaster recovery
- Configured **binary logging**, row-based replication, relay logs, a dedicated replication user, and a read-only slave replica
- Resolved MySQL 8.0 authentication issues, replication permission errors, sync failures, and binlog position misconfigurations
- Validated replication with a live database, confirming healthy Slave_IO/SQL_Running status with zero replication lag

Other Achievements

- Deployed 15+ real-world applications (Laravel, Node.js, Python, React) on Linux servers
- Implemented real-time monitoring with Prometheus & Grafana for performance tracking
- Hardened servers with firewall rules, SSH key-based access, and cron auditing
- Managed WHM/cPanel environments for clients: domain management, SSL, backups, and email
- Automated backups and system health checks using Bash scripts and cron jobs
- Handled direct client support: tickets, deployments, and post-deployment fixes

CERTIFICATIONS

- Red Hat Certified System Administrator (RHCSA) — Certification ID: 240-200-170
- Red Hat Certified Specialist in Containers (EX188) — Certification ID: 240-200-170

EDUCATION

B.A B.Ed — Pandit Deendayal Upadhyaya Shekhawati University

2021 – 2025

DevOps Course — GRRAS Institute

CORE STRENGTHS

- Strong Linux fundamentals & scripting
- Growing DevOps skill set — Docker, CI/CD, Kubernetes fundamentals, AWS & Azure basics
- Client communication and issue resolution
- Quick learner with adaptability to new tools
- Troubleshooting under pressure
- Attention to detail and documentation skills
